1. **5-minute-epoxy**

???? ??????????: ????????

Particularly fast-drying, with initial hardness after only 5 minutes. Very high adhesive strength and easy to dispense via a double nozzle. 28 g

pack covers an adhesive surface of approx 330 cm². The material can be thickened slightly with cotton fibre to form a thixotropic, peanut butter-like consistency.In this way, the filling capacity of the adhesive is improved and resin is saved.
